Are you having a pain today: Y	Severity of Pain:

Patient's Symptoms

<u>Headache</u>	The patient has been experiencing a severe, throbbing headache in the front of their forehead for a few days, with a severity level of 7. Sudden noises aggravate the pain.
<u>Photophobia</u>	The patient has developed an increased sensitivity to light, unable to tolerate bright lights and finding normal room lighting too strong, persisting as long as the headache.
<u>Phonophobia</u>	The patient indicates an increased sensitivity to sound, which increases the intensity of the headache.
<u>Nausea</u>	The patient has been experiencing nausea, reportedly having a queasy stomach particularly with abrupt movements and during meal times. The nausea has led to occasional vomiting.
<u>Fatigue</u>	The patient has reported ongoing fatigue for the past week, with unrefreshing sleep despite trying to get ample rest.
<u>Visual disturbances</u>	The patient reports zigzag, shimmering, wavy patterns and flashing lights in their vision, occurring periodically, either before the onset of the headache or independently.
